

FILMOR

We've produced medical tape to treat various skin conditions for 50 years, carefully gathering and incorporating feedback and opinions from leading medical institutions.

FILMOR is a product that could only be developed through our long expertise and experience in the field.

In manufacturing our products, we focus not just on functionality and quality, but also on ease of use and cosmetic appeal.

We're committed to creating products of the highest integrity to help you achieve your skincare goals.

Soft as Skin

7-Micron-Thick Layer of Armor

Innovative UV Care

UV BLOCK FILM

approx. **97%** UVblock

FILMOR

Benefits of FILMOR

A clear, ultrathin, 7-micron protective film that was developed using the latest medical technology

Suppresses melanin generation and pigmentation; also reduces scarring, while being gentle on the skin.

Benefit 1

Physically blocks up to 97% of UV rays.

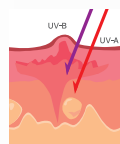

Benefit 2

Protects sensitive skin from irritants, especially around the face.

Benefit 3

So soft you'll forget it's there.

* This image was processed to make the film clearly visible. The actual film is practically invisible.

For skin that has recovered superficially but remains vulnerable below

Post-procedure skin is mildly inflamed and remains highly vulnerable. While the surface appears to have recovered, the deep skin is still healing and remains very sensitive. Skin in this condition is especially susceptible to UV damage, making it critical to protect against UV radiation until the deep skin has recovered as well.

Benefit 1

Physically blocks up to 97% of UV rays.

The film offers long-lasting UV protection; no need to reapply cream.

Benefit 2

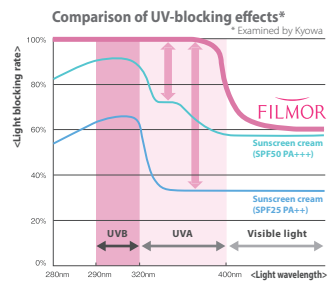

Protects sensitive skin from irritants, especially around the face.

FILMOR is ideal for those reluctant to apply makeup or sunscreen directly to sensitive skin. It shields skin from direct contact with hair, hands, and airborne particles and irritants. It also provides secure protection for sensitive post-procedure skin.

◆ Powerful UV Shielding Beyond What Creams Can Achieve

FILMOR blocks about 97% of harmful UV rays—rays that also cause melanin generation and pigmentation. FILMOR achieves higher UV-blocking rates compared to sunscreen creams.

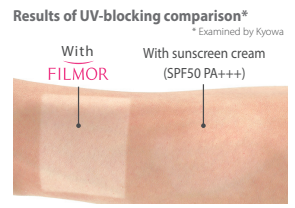

* Exposure to powerful UV rays may result in tan lines adjacent to areas where FILMOR has been applied. Use with other sun-blocking products is therefore recommended.

High UV-blocking rates backed by scientific studies
Offers significant advantages over creams.

◆ Ensuring long-lasting UV protection

FILMOR is waterproof and continues to protect the skin even when exposed to moisture. It is also resistant to rubbing or washing off due to sweat, sebum, or contact with clothing, while remaining entirely safe to use.

Clearly different from sunscreen cream!
* This study was done outdoors for 8 hours. One FILMOR film was applied, with no further manipulation. The sunscreen cream was re-applied every two hours.

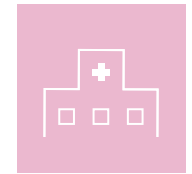

◆ Protecting skin from external irritants

As a film and physical barrier, FILMOR is applied like a bandage, not spread like cream. It safeguards skin from direct contact with irritants. FILMOR is impermeable to water or chemicals, thus providing an extra layer of protection against physical contact or exposure.

◆ Made from medical-grade materials, FILMOR is completely safe

FILMOR is used in medical care to protect skin affected by various problems. Since it's a film, this powerful UV-blocking material won't permeate into the skin. FILMOR leaves no residual chemicals behind, ensuring that it's completely safe to use.

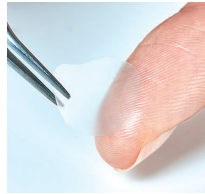

Benefit 3

So soft you'll forget it's there.

FILMOR complements your usual makeup regime, since it's entirely natural-looking and virtually undetectable. It's comfortable to use in every sense, and can even uplift you.

◆ So thin and clear, you'll forget it's there

Ideal for any skin color, FILMOR is a clear film measuring 7 microns thick (10 times thinner than an eggshell membrane). It's highly breathable and comfortable, allowing sweat to evaporate through the film. Its unique surface processing gives it a texture that feels remarkably like your own skin. Simply apply it, and it will easily mold to the contours of your skin.

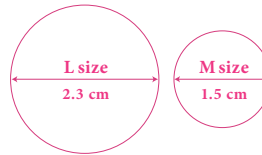

◆ Highly compatible with makeup

You can apply your daily makeup over FILMOR, so your cosmetics regime will be completely unaffected. It's compatible with both powder and liquid foundations. Spread foundation over the face from the center to the outline. This prevents the accumulation of foundation at the edges and promotes a natural look.

FILMOR <UV Blocking Film>

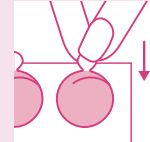

M size: 1.5 cm in diameter 24 sheets/56 sheets
L size: 2.3 cm in diameter 18 sheets

How to use

Wipe off skin oil from the site before applying.

- 1 Pinch the round tab and remove gently from the liner paper.

- 2 Apply to the site and press firmly into place for about 30 seconds.

- 3 Pinch the tab of the covering film and remove with one hand while holding the center of the covering film with your other hand.

- 4 Smooth FILMOR firmly against the skin to keep it from peeling.
